

Jake Finlay

Full-Stack Software Developer • Software Engineer

Hamilton, ON | +1 (365) 889-1016 | finlaj11@mcmaster.ca | linkedin.com/in/jfinlay | github.com/JakieBoi77 | jake.finlaytech.ca

EDUCATION

McMaster University

Bachelor of Engineering, Software Engineering, Co-op

Cumulative GPA: 3.8 /4.0

Expected Graduation: April 2027

WORK EXPERIENCE

Evertz Microsystems

Software Design Engineer – Co-op

May 2025 – Aug 2026

Burlington, ON

- Worked on MAGNUM OS, a full stack application that provides control, orchestration, monitoring, and analytics for customer's Evertz equipment.
- Worked in Evertz's frontend monorepo, a code repository implemented using HTML, CSS, JavaScript, TypeScript, React, Python, REST APIs, GraphQL, JSON-RPC, and Nx for monorepo management.
- Built a new design system and created a shared component library using TypeScript, React, Tailwind CSS, and Storybook with the goal of migrating our apps to a design with better UI/UX.
- Migrated a large portion of Evertz's frontend code to the new design system by using the shared component library that I had developed previously. Worked with the design team to make sure that the migration aligned with other Evertz apps.
- Resolved 100+ Jira tickets in Evertz's frontend monorepo by using Git / GitHub to ship bugs fixes and improvements that customers actually needed.
- Caught bugs, improved code quality, and enforced repository standards in new many new features as a trusted code reviewer of Evertz's frontend monorepo.
- Collaborated with multiple teams to confirm that code quality, ticket requirements, and product standards were all being met.
- Mentored the incoming co-op student and created extensive documentation so that onboarding would be as smooth as possible.

Superior Boiler Works and Welding Limited

Systems Engineer – Co-op

May 2023 – Aug 2023

Hamilton, ON

- Resolved computer and email issues across Windows Server, Active Directory, Microsoft 365, and PowerShell to get staff back to work quickly.
- Kept staff online by maintaining on-premises server infrastructure. This included troubleshooting virtual machines, storage servers, routers, switches, firewalls, and battery backups.
- Managed company accounts for 100+ employees, using Active Directory and PowerShell to cut down new-hire setup time.
- Made sure company computers were up to date by managing Windows updates and pushing security fixes through Windows Server Update Services (WSUS).
- Helped staff spot scams before they caused damage by running internal phishing tests in Outlook.

Stoney Creek Furniture

Warehouse Assistant – Part Time

July 2020 – Sep 2022

Hamilton, ON

- Led the student team by delegating the day's work across customer pick-ups, furniture assembly, delivery organization, and warehouse upkeep.
- Became certified on a Class 2 Forklift (also known as an order picker) to access to furniture stored within the racks of the warehouse.
- Operated various compactors to control the waste created from opening products in the warehouse.
- Learned how to use Storis, the furniture inventory management system, so that I could complete my assigned tasks while still maintaining inventory accuracy.

PROJECTS

[Deal Check](#) | Expo, React Native, TypeScript, Python

- Developed a mobile app using Expo, React Native, TypeScript, and Python that helps people decide whether a car listing is a good deal.
- Designed multiple screens and navigation so users can enter a car's details, upload a photo, and get back a clear yes-or-no verdict with an explanation.
- Connected the app to a Python/Flask backend so results and saved history would load reliably across iOS and Android.

- Contributed to project requirements and planned the overall system architecture with the team before development.

[Link Ripple](#) | *Next.js, TypeScript, React, MongoDB*

- Led development of a web app using Next.js, TypeScript, React, and MongoDB that lets users register a handle and share all of their links from one public page.
- Implemented the frontend by building out the landing page, dashboard, logins, and public profile pages.
- Designed the backend with user authentication using JWT and password hashing for secure logins.
- Set up testing using Vitest for units tests and Playwright for end-to-end tests to ensure that features would continue to work.

[Bankler](#) | *Next.js, TypeScript, React, Tailwind CSS*

- Built a modern banking platform using Next.js, TypeScript, and Tailwind CSS to learn full-stack development and how professional banking apps are made.
- Designed and integrated banking-specific features, including real-time transaction updates, account balance retrieval, and transaction history by using server-side rendering to keep the app responsive.
- Set up secure sign-in and account management with Appwrite and used protected routes to keep financial data private.
- Integrated Plaid and Dwolla so that users could connect their bank accounts and send money between them.
- Automated deployments with GitHub Actions and added Sentry for error tracking.

[Island Explorer](#) | *Java, JUnit, UML, Maven*

- Developed a Java program for a drone-exploration competition that autonomously scans and maps unexplored islands to find safe rescue-landing zones.
- Applied object-oriented programming principles and design pattern to structure the code, ensuring that the program would be both reusable and maintainable for my team.
- Collaborated with my team using GitHub and a Kanban board to track and resolve issues.
- Wrote a JUnit test suite to cover the drone's actions and verify the correct behavior across different maps.
- Utilized Maven for build automation, JAR file creation, and integration with the testing arena.

SKILLS

Languages: Python, Java, HTML, CSS, JavaScript, TypeScript, C, C++, C#, SQL, Verilog

Frameworks and Libraries: Next.js, React, Node.js, Express.js, Three.js, .NET, Tailwind CSS, JUnit

Technologies: PostgreSQL, MongoDB, DB2, Docker, Azure, Apache2, PM2, Maven, PowerShell, Windows Server

Tools: Unix, Git, GitHub, GitHub Workflows, SonarQube, UML, MATLAB, Microsoft Office (Word, PowerPoint, Excel)
